

Corporate Overview

Who We Are

Our Promise

Every day the people at AMAG aim higher, devoting our passion and perseverance to finding new and better ways to support the health of patients and families.

Our Values

Accountable

Collaborative

Transparent

Sense of Urgency

Results Focused

AMAG is a biopharmaceutical company focused on bringing therapeutics to market that provide clear benefits and help improve people's lives.

Headquartered in Waltham, Massachusetts, with locations in Tucson, Arizona, and San Bruno, California, AMAG contributes to better health for patients and families by:

- Developing and delivering important therapeutics
- Conducting clinical research in areas of unmet need
- Creating education, resources and tools to support patients and providers
- Expanding our product portfolio with additional therapeutics that could benefit from our business and clinical expertise.

Our Contributions

We put patients and their families at the center of everything we do. It starts by understanding their needs and the needs of the providers who care for them. This understanding shapes our approach to delivering therapeutics and comprehensive support services to the people we serve.

Products & Services

Our products support the care of patients and families facing complex and potentially serious conditions including high-risk pregnancies, iron deficiency anemia and cancer.

Taking Action on Maternal & Newborn Health Inequities

Health inequities remain one of the most intractable barriers to better health for many of the mothers, newborns and families we serve. We are driven to raise awareness of this important issue, and work in collaboration with healthcare leaders at both the national and community level to advance research, education and support initiatives that have the potential to result in greater health equity for individuals and communities across the nation.

In addition, through CBR®, we help families to preserve newborn stem cells, which are used today in transplant medicine for certain cancers and blood, immune and metabolic disorders. These stem cells have the potential to play a valuable role in the ongoing development of regenerative medicine.

Research, Education & Support

We devote our expertise and resources to bringing therapeutics to market in a patient-centric way and to investing in research, education, support and partnerships to benefit the patient and provider communities we serve.

Clinical Research

Too many patients and families continue to experience the effects of serious health conditions – including cerebral palsy, pediatric stroke, preterm birth and preeclampsia – that have few, if any, treatment options available today. The research in which we invest focuses on advancing clinical understanding and potential future treatments for these unmet health needs.

Patient Education & Support

Our goal to support the health of patients and families goes beyond the therapeutics we provide. It extends to the education and support we develop in collaboration with healthcare experts and advocates. From disease awareness information to a nurse-supported adherence initiative, our programs help empower patients and families to better understand and proactively manage their health.
